SUMMARY

Results-driven Software Engineer and AI Automation Specialist with a strong background in full-stack web development and scalable architecture. Experienced in founding and leading technical teams to build high-impact SaaS platforms, prediction markets, and AI-powered automation tools. Proficient in React, Node.js, Python, and cloud-native AWS infrastructure. Demonstrated ability to architect complex systems, optimize performance, and deliver innovative solutions that drive business growth.

PROFESSIONAL EXPERIENCE

Valendata

December 2025 – Present

Founder & Lead Engineer

- Built an AI-powered workflow automation platform where a Brain agent (LLM-orchestrated) designs, writes, and executes multi-step automation workflows end-to-end without human intervention.
- Engineered a Chrome extension bridge with direct Chrome DevTools Protocol (CDP) access, enabling 15ms JavaScript execution in the user's real browser bypassing anti-bot protections.
- Designed a hybrid agent+code execution pattern: browser-use agent navigates and interacts with any site, while a code step extracts structured data from the already-loaded DOM enabling scraping of anti-bot protected sites (DataDome, Cloudflare, PerimeterX).
- Built a secure multi-layer code execution pipeline: E2B cloud sandboxes for general Python, local Playwright subprocess with CDPProxy for browser-attached code, and direct extension bridge for real-time DOM extraction.
- Implemented a real-time workflow execution engine with WebSocket SSE streaming, graph compilation, semantic analysis, and automatic error recovery giving users live step-by-step visibility into running automations.
- Integrated LiteLLM as an LLM proxy layer with metering and callback hooks, enabling multi-model support across the Brain orchestration system.

KoraStake

2024 – Present

Co-Founder / CTO / Lead Engineer

- Co-founded and architected Nigeria's premier mobile-first prediction market platform, enabling users to trade on sports, politics, and pop culture events.
- Led the end-to-end engineering of the platform, implementing secure identity verification, instant Naira payouts via major banks and fintechs, and real-time odds tracking.
- Engineered a highly scalable and secure backend infrastructure to handle high-frequency transactions, user wallets, and live market data with minimal latency.
- Integrated secure payment gateways (Paystack/Flutterwave) and USSD capabilities to ensure seamless funding and withdrawals for a broad Nigerian user base.

Future Cast Studio

April 2025 – Present

Full-Stack Engineer

- Spearheaded the development of Kolik.com, a comprehensive AI-powered HR platform designed to manage leave, payroll, and employee data, resulting in a 25% increase in operational efficiency for clients.
- Developed and maintained full-stack features for SaaS platforms in the edtech, ecommerce, and logistics sectors using React, Node.js.
- Built scalable RESTful APIs and integrated them with cloud infrastructure on AWS, ensuring high availability and performance.
- Developed a highly successful mobile application that was featured as "App of the Day" on the US App Store, demonstrating expertise in mobile-first architecture and UI/UX optimization.
- Implemented data-driven solutions with MySQL, optimizing query performance and supporting real-time analytics.

Blinx Solutions

April 2025 – September 2025

Full-Stack Engineer (Contract)

- Developed full-stack features for a Business Intelligence platform focused on supply chain and finance process optimisation.
- Built and optimized Node.js backend services with SQL databases, enabling real-time data visualisations and KPI tracking.
- Deployed and maintained applications on AWS, ensuring reliable cloud infrastructure and seamless integration across microservices.

CMND.ai

June 2024 – August 2024

Software Engineer Intern

- Developed Python and JavaScript applications as part of an agile team, contributing to scalable and robust software solutions.
- Built and optimized APIs using FastAPI and React.js, resulting in improved system efficiency and enhanced user experience.
- Deployed applications on AWS Lambda for global scalability and reliability.
- Containerized applications using Docker, streamlining deployment processes and ensuring environment consistency.

LEGACY INC

September 2023 – December 2023

Data Analyst Intern (Remote)

- Designed and implemented scalable data pipelines for efficient ingestion and processing.
- Collected and prepared data from diverse sources, ensuring quality and integrity.
- Explored web scraping and mining techniques to create foundational ETL processes for diverse datasets.

TECHNICAL SKILLS

- **Tools:** Git, GitHub, JIRA, Slack, Trello, Notion, CodeMagic, Docker, Kubernetes, AWS, Azure Pipelines, Jenkins, CircleCI, DigitalOcean, Google Cloud Console, Paper Trail, Vercel, Netlify, Render, NGROK, NGINX.
- **Frameworks & Libraries:** React.js, Next.js, Material-UI, Ant Design, PrimeReact, Tailwind CSS, Node.js, Express.js, Nest.js, Xest.js, GraphQL, Flask, FastAPI, REST APIs, Firebase, MongoDB, PostgreSQL, MySQL.
- **Web scraping:** Selenium, Playwright, Chrome DevTools Protocol, ETL Pipelines.
- **Testing & QA:** Jest, Mocha, Unit Testing, Integration Testing, and Cypress.
- **Cloud Services:** AWS (EC2, S3, Lambda, CloudFormation), Google Cloud Platform, Azure.

EDUCATION

BSc. Computer Engineering

European University of Lefke, Mersin, Turkey

CERTIFICATIONS

- Python for Data Science, AI & Development (Coursera) – Issued September 2023
- Introduction to Data Engineering (Coursera) – Issued August 2023
- High School Leaving Certificate - Saint Paul's Academy, Jos, Nigeria
- Primary School Leaving Certificate - Wesley International School
